Leasing / Financing Options Available

The FD-25 is one of our original and most popular densifiers. It is a hand-fed machine that processes foam onsite through a process of shredding while adding heat to densify and extrude densified purge blocks which become the final recyclable product. The FD-25 densifies expanded polystyrene(EPS), expanded polyethylene(EPE) and expanded polypropylene(EPP).

All FD Series foam densifiers have passed rigorous air quality testing for health and environmental safety. Better Densifiers provides equipment financing and leasing programs, as well as a one-year warranty on all parts and labor.
